Description

Cryptex is a special container with a mechanical combination lock (rotating rings with letters or digits), which people used hundreds of years ago to keep secrets. Inside the cylinder there was a chamber where you could keep a piece of paper with secret data.
Today it’s better to use a USB flash drive for data storage. Cryptex USB flash drive was engineered in accordance with original sketches by Leonardo Da Vinci.
A mechanical combination lock protects the flash drive from an immediate access. You need to know the 5-digit code to gain access to the USB flash drive hidden inside. Only those who know the password can use it. A great way not only to protect the information, but also to add an element of a game into everyday life.
